ITEM 661
TRAFFIC PAINT (SOLVENT BASED)

661.1 Description. This Item shall govern for the materials, composition, manufacture and testing of all traffic paint and related materials as covered herein.

661.2 Bidder's and/or Vendor's Requirements. All prospective bidders are hereby notified that, before any bid is considered, Harris County may require the bidder to submit a statement in detail of the facts as to the previous experience of the bidder in performing similar or comparable work, as to the business and technical organization, financial resources and the manufacturing facilities of the bidder which are to be used in performing the contemplated work. Any bid submitted by a firm with unsatisfactory facilities, resources, equipment or experience may be rejected by Harris County.

661.3 Intent. The coating design specified has been stipulated by means of carefully controlled formulations durability testing methods. The intent of Harris County Public Infrastructure Department is to procure coatings which are identical in all essential respects to the standards of the Texas Department of Transportation (TxDOT); hereafter referred to as "Standards". Paints provided under this Item shall meet all applicable requirements of the Environmental Protection Agency.

Specifications, codes and accepted practices not specifically listed in these Standard Specifications are not applicable.

When required, the paint manufacturer shall supply Labor Form LSB-OOOS-4, "Material Safety Data Sheet."

661.4 Conformance of Finished Products. Coatings shall conform, on a weight basis, to the composition requirements of the standard formulae. No section variation from the standard formulae will be permitted except for replace of volatiles lost in processing, or those approved by the Engineer. The finished coatings shall conform with all requirements stipulated for each standard formulae, and shall equal a Wet Standard in characteristics such as color, drying, flow, settling, brush ability, can stability, hiding, etc.

Film characteristics such as gloss, hardness, light permanency, adhesion, etc., shall also conform. When testing for such conformity, the coating shall be applied and tested under parallel conditions with the Wet Standard.

The finished product shall be free of skins and foreign materials.

661.5 Mill Tests and Testing. All paint Contractor's shall be required to furnish to the Engineer a copy of certified Mill test report for all paint to be furnished and delivered to Harris County. Harris County shall have the
option of performing necessary tests on material purchased directly by Harris County, the cost of testing shall be borne by the Contractor and/or supplier. The manufacturer shall be required to reimburse Harris County for the cost of storage and/or handling of paint failing to meet specification requirements.

Testing shall be in accordance with TxDOT requirements. Any questions should be addressed to the Engineer.

Raw materials and finished products which fail to meet any requirements of these Standard Specifications shall be subject to rejection. Final acceptance or rejection shall be based on results of tests on samples of raw materials and paint taken during production, and upon tests made on finished paints prior to delivery. Approval of materials, as a result of preliminary testing prior to manufacture into finished coatings, shall not be binding upon final approval or rejection. Because of the possibility of contamination and volatile losses, it shall be agreed that only the Wet Standard, currently in possession of Harris County or the licensed testing agencies, shall constitute standards for final comparison involving acceptance or rejection. The judgment of the Engineer shall be final in all questions relative to conformance with the provisions of these Standard Specifications.

661.6 Manufacturing procedures, except when specified, shall be left to the discretion of the Contractor. It is the responsibility of the manufacturer to ascertain that the raw materials and manufacturing procedures he proposes to use will produce a product meeting the specification requirements.

661.7 Shipment shall be made in suitable, strong, well sealed containers which not only meet specifications and Federal requirements, but are also sufficiently sturdy to withstand normal handling to which shipments are subjected in transit. FINISHED COATING CONTAINERS AND CASES SHALL BE PLAINLY AND SECURELY LABELED WITH THE NAME AND THE DESIGNATION OF THE COATING, ORDER NUMBER, REQUISITION NUMBER, BATCH NUMBER, DATE OF MANUFACTURE, GROSS WEIGHT, AND MANUFACTURER'S NAME. LABELING SHALL BE ON THE SIDES OF CONTAINERS AND CASES. LABELS MUST BE SUFFICIENTLY MOISTURE-RESISTANT TO WITHSTAND OUTDOOR STORAGE FOR A MINIMUM OF ONE YEAR. When the finished product is palletized for shipment, the labels shall be to the outside for easy identification. Once the finished product has been labeled properly, the label shall not be modified or changed in any manner without specific approval of the Engineer.

Containers shall be filled by weight based on the actual gallon weight of the paint at 77 degrees F.

661.8 Raw Materials. The exact brands and types of raw materials used in the Wet Standard are listed for the purpose of facilitating the selection of parallel material equal not only in quality and composition but also in
physical and chemical behavior after being used in the finished product. Since evaluation of paint containing questionable materials may require sixty days and since meeting delivery schedules is a responsibility of the paint manufacturer, he is reminded that he should schedule material procurement and paint production to permit him to meet delivery commitments. The final decision as to the equality of materials shall be made by Harris County. After Harris County has agreed to the brand names of raw materials proposed by the Contractor, no substitutions will be allowed during the manufacture without prior agreement with the Engineer.

"The Contractor should be aware that it is his responsibility to select raw materials that not only meet the individual raw material specifications but will also produce coating conforming to the specific formulae requirements."

A. Materials of Foreign Origin: Because of the limited information available on materials manufactured outside the continental limits of the United States, the manufacturer is advised to review Sections 661.5 and 661.8 of this Item when considering the use of materials of foreign origin.

B. Materials Required to Meet Federal and ASTM Specifications: All materials required to meet Federal or ASTM specifications must conform to the specifications as shown. Specifications or Amendments of other dates will not supersede.

C. PIGMENTS:

1. White:
   a. Titanium Dioxide, shall meet ASTM D476, Type I or II.
   b. Lead free Zinc Oxide shall meet ASTM D79 either American process or French process.

2. Colored: Titanium Dioxide, Special, Tutile, non-chalking:

   Specific Gravity 4.1 + 0.05
   Oil Absorption 18 + 10%
   Moisture 0.5% max.
   Retained on #325 Mesh 0.1% max.
   \( \text{TiO}_2 \) 95% min.
   \( \text{Fe}_2\text{O}_3 \) 2.0 - 3.0%
   PH 6.5 - 7.0
   Ignition Loss 0.34% max.
   \( \bar{Y} \) (luminosity) 42.5-45.5

3. Medium Chrome Yellow:
Color and Color Characteristics. The luminance factor of the pigment shall be within the limits listed below when tested before and after exposure.

<table>
<thead>
<tr>
<th></th>
<th>Min.</th>
<th>Max.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Initial</td>
<td>53</td>
<td>59.0</td>
</tr>
<tr>
<td>Final</td>
<td>45</td>
<td></td>
</tr>
</tbody>
</table>

In addition, the allowable change between the initial and final luminance factors shall be not more than 9 units.

The initial X, Y chromaticity color coordinates of the pigment shall be within the rectangle defined by the sets of coordinates shown below:

<table>
<thead>
<tr>
<th>X</th>
<th>Y</th>
</tr>
</thead>
<tbody>
<tr>
<td>0.490</td>
<td>0.455</td>
</tr>
<tr>
<td>0.511</td>
<td>0.433</td>
</tr>
<tr>
<td>0.514</td>
<td>0.480</td>
</tr>
<tr>
<td>0.535</td>
<td>0.458</td>
</tr>
</tbody>
</table>

Method of Test: The pigment shall be tested according to TxDOT Test Procedure Tex-810-B.

Color Standard: National Bureau of Standards, Chromatic Standard No. SCH-30. The formula of the test enamel using the pigment to be tested is as follows:

<table>
<thead>
<tr>
<th>Material</th>
<th>Parts by Weight</th>
</tr>
</thead>
<tbody>
<tr>
<td>Color Pigment</td>
<td>54.0</td>
</tr>
<tr>
<td>Long Oil Alkyd Resin (1)</td>
<td>31.5</td>
</tr>
<tr>
<td>4% Calcium Drier</td>
<td>0.6</td>
</tr>
<tr>
<td>6% Cobalt Drier</td>
<td>0.3</td>
</tr>
<tr>
<td>Anti-Livering Agent</td>
<td>0.1</td>
</tr>
<tr>
<td>Anti-Skinning Agent</td>
<td>0.2</td>
</tr>
<tr>
<td>Mineral Spirits (2)</td>
<td>13.3 (3)</td>
</tr>
</tbody>
</table>

b. Mineral Spirits meeting ASTM D235, Type IV.

c. The amount of Mineral Spirits may be varied slightly to produce the desired grinding consistency.

Number of coats: Two
4. Inert:

   a. Talc, Paint-Grade Magnesium Silicate shall meet ASTM D605.

   b. Calcium Carbonate:

      \[ \text{CaCO}_3 \text{ min. 97.0\%} \]
      \[ \text{H}_2\text{O max. 0.4\%} \]
      \[ \text{Specific Gravity 2.63-2.73} \]
      \[ \text{Weight retained on \#325 Screen max. 0.75\%} \]

      Color: Equal to material listed in Standard Formula. Substitution in a Standard Formula shall not result in a viscosity variation greater than 4 KU.

   c. Calcined Kaolin (Aluminum Silicate Anhydrous)

      \[
      \begin{array}{ccc}
      \text{Min. \%} & \text{Max. \%} \\
      \text{A}_2\text{O}_3 & 39.6 & 44.0 \\
      \text{SiO}_2 & 51.0 & 56.5 \\
      \text{Fe}_2\text{O}_3 & 1.0 & \text{TiO} \\
      \text{CaO}^2 + \text{MgO} & 0.8 & \text{Na}_2\text{O} + \text{K}_2\text{O} \\
      \text{Ignition Loss} & 1.0 & \text{In addition, the X-ray diffraction pattern shall match the X-ray diffraction pattern specified by the TxDOT.} \\
      \end{array}
      \]

      Materials having color requirements shall be tested according to TxDOT Test Procedure Tex-810-B.

D. RESINS:

   2. Acrylic Copolymer Resin

      This material shall be an acrylic copolymer composed of i-butylmethacrylate-diethyl aminoethyl methacrylate copolymer binder resin. The characteristics of the acrylic copolymer resin shall be as follows:

      \[
      \begin{array}{ccc}
      \text{Specific Gravity, 25°C(77°)} & \text{1.0} \\
      \text{Color, Gardner, 20\% by Weight in Toluene, Maximum} & \text{1.0} \\
      \end{array}
      \]
Acid Number, Maximum.........................................................1.0
Glass Transition Temperature..............................................50°C (122°F)
Viscosity, 20% by Weight in Toluene, Pascal
Seconds(Centipoises).....................................................0.020-0.030 (20-30)

3. Traffic Paint Alkyd Resin Solution:

a. General:

Type Pure, drying alkyd
Oil Length/Type* Medium/Soya, linseed or tall
Solvent Toluene

No mixture of two or more oils is permitted.

Compatibility – A 1:5 solution 75% Traffic Alkyd Resin Solution and Toluene shall be clear and transparent and shall show no separation after 24 hours of storage in a 3/4 full test tube at 75° to 85° F. This rubber alkyd-solvent solution shall produce a clear film upon drying.

b. Solid Resin Basis (based on non-volatile material):

Phthalic Anhydride 33 to 37%
Oil Acids 48 to 55%
Acid Number 8.0 max.
Ash Residue 0.10% max.
Unsaponifiable Material 2.0% max.
Iodine Number of Fatty Acids 115 min.
Refractive Index of Fatty Acids 1.4660 min.
Tall Oil Alkyd Resin 1.0% max.

c. 45% Resin Solids Basis:

Drying Time: Reduce the resin to 45% solids with Toluene, add (based on the resin solids present) the equivalent of 0.06% Cobalt (metal) and 1% Lead (metal). Let the mixture set for 3 hours before testing. A 3 mil wet film of this solution shall set-to-touch in less than 90 minutes.

d. In addition to the above requirements, the Traffic Alkyd Resin Solution shall meet the following Percent Transmittance requirements when tested according to TxDOT Test Procedure Tex-814-B, utilizing methyl isobutyl ketone as the primary solvent and methyl alcohol as the precipitating agent.
% Transmittance  Min.  Max.
T  10     70%
T

Calculate volume in milliliters of precipitating agent as follows:

\[ V = 91 \times X \text{ and } V = 1.398 \times V \]

Where: \( V \) = volume of precipitating agent required for \( T \);

\( X \) = grams of alkyd resin solids and

\( V \) = additional volume of precipitating agent for \( T \).

E. THINNERS:

1. Acetone
2. Toluene
3. Methyl Alcohol meet ASTM D1152

F. ADDITIVES AND CHEMICALS:

1. Driers: Shall pass ASTM D600

2. Additives listed below must be similar and equal to the standard sample submitted to an independent licensed testing laboratory by the manufacturer and approved by the Engineer prior to the award of contract for coatings in which the additive is proposed for use:
   
   a. Soya Lecithin
      
      This material shall be of suitable quality for use in the manufacture of paint.
   
   b. Anti-Skinning Agent
      
      This material shall be an anti-skinning agent suitable for use in paints.
   
   c. Treated Bentonite Clay:
      
      1. Bentone 34, NL Industries;
      
      2. Claytone 40, Southern Clay Products:
G. STANDARD FORMULAE:

1. **WPT - 8f White Paint, Traffic**
   - Traffic Alkyd, 75% solids Toluene
   - RCI, Beckosol 97-150
   - Acrylic Copolymer BR-210
   - Chlorinated Paraffin, Type 1, Dover, Paroil 40E
   - Soya Lecithin
   - Titanium Dioxide, Rutile, DuPont, Ti-Pure R-900
   - Lead Free Zinc Oxide, ASARCO, AZO-66
   - Talc, WC&D 2664
   - Calcium Carbonate, J.M. Huber, Hubercarp M-4
   - Treated Bentonite Clay
   - Methanol
   - 36% Lead Drier
   - 12% Cobalt Drier
   - Toluene
   - Anti-Skinning Agent
   - Acetone

   **TOTAL** 1,270

Gallon Weight: ±0.05 of theoretical gallon weight

Grid: 4 minimum, Particles: 8 maximum (TxDOT Test Procedure Tex-806-B)

Viscosity: 83 to 97 KU

Skinning: No skinning within 48 hours (TxDOT Test Procedure Tex-811-B)
2. YPT-8f, Yellow Paint, Traffic

TOTAL 1,295

Gallon Weight: ±0.05 lbs. of theoretical gallon weight

Grind: 4 minimum, Particles: 8 maximum (TxDOT Test Procedure Tex-806-B)

Viscosity: 83 to 97 KU
661.9 Installation Methods. All traffic paint applications shall meet the following requirements:

A. Traffic paint shall be applied at the rate of one gallon of unthinned paint per 105 square feet of surface area.

B. Traffic paint shall be applied with a minimum thickness of 15 mils, measured in a wet condition.

C. Paint striping shall be applied and measured to \( \pm \frac{1}{4}'' \) of the specified widths.

All traffic paint striping not meeting these requirements shall be "touched up", removed and/or completely restriped to these standards and in accordance with the drawings at no additional cost to Harris County, as directed by the Engineer.

Where traffic buttons exist, the paint shall be applied to the pavement adjacent to, but not on the buttons or markers, unless another method is specified.

661.10 Testing. When required, the Contractor shall pay for and provide to Harris County, a testing report performed by a local testing laboratory designated by the Engineer. The report shall verify that the raw and finished materials to be supplied under this contract meet the requirements of this Item.

661.11 Rejection, materials and finished products which fail to meet any or all requirements of these Standard Specifications shall be subject to rejection. All materials and finished products rejected by the Engineer, whether in containers or applied to roadway surface shall be removed from the jobsite and replaced with materials meeting specifications and requirements and all costs of such removal and replacement shall be borne by the Contractor.

661.12 Measurement and Payment. Payment for this material and its installation shall be in accordance with the conditions prescribed in the contract awarded by Harris County and as shown on the bid items, or payment shall not be made directly but will be considered subsidiary to the furnishing and installation of white or colored traffic paint, as specified.
There are no line code(s), description(s), or unit(s) for this Item.

END OF ITEM 661
